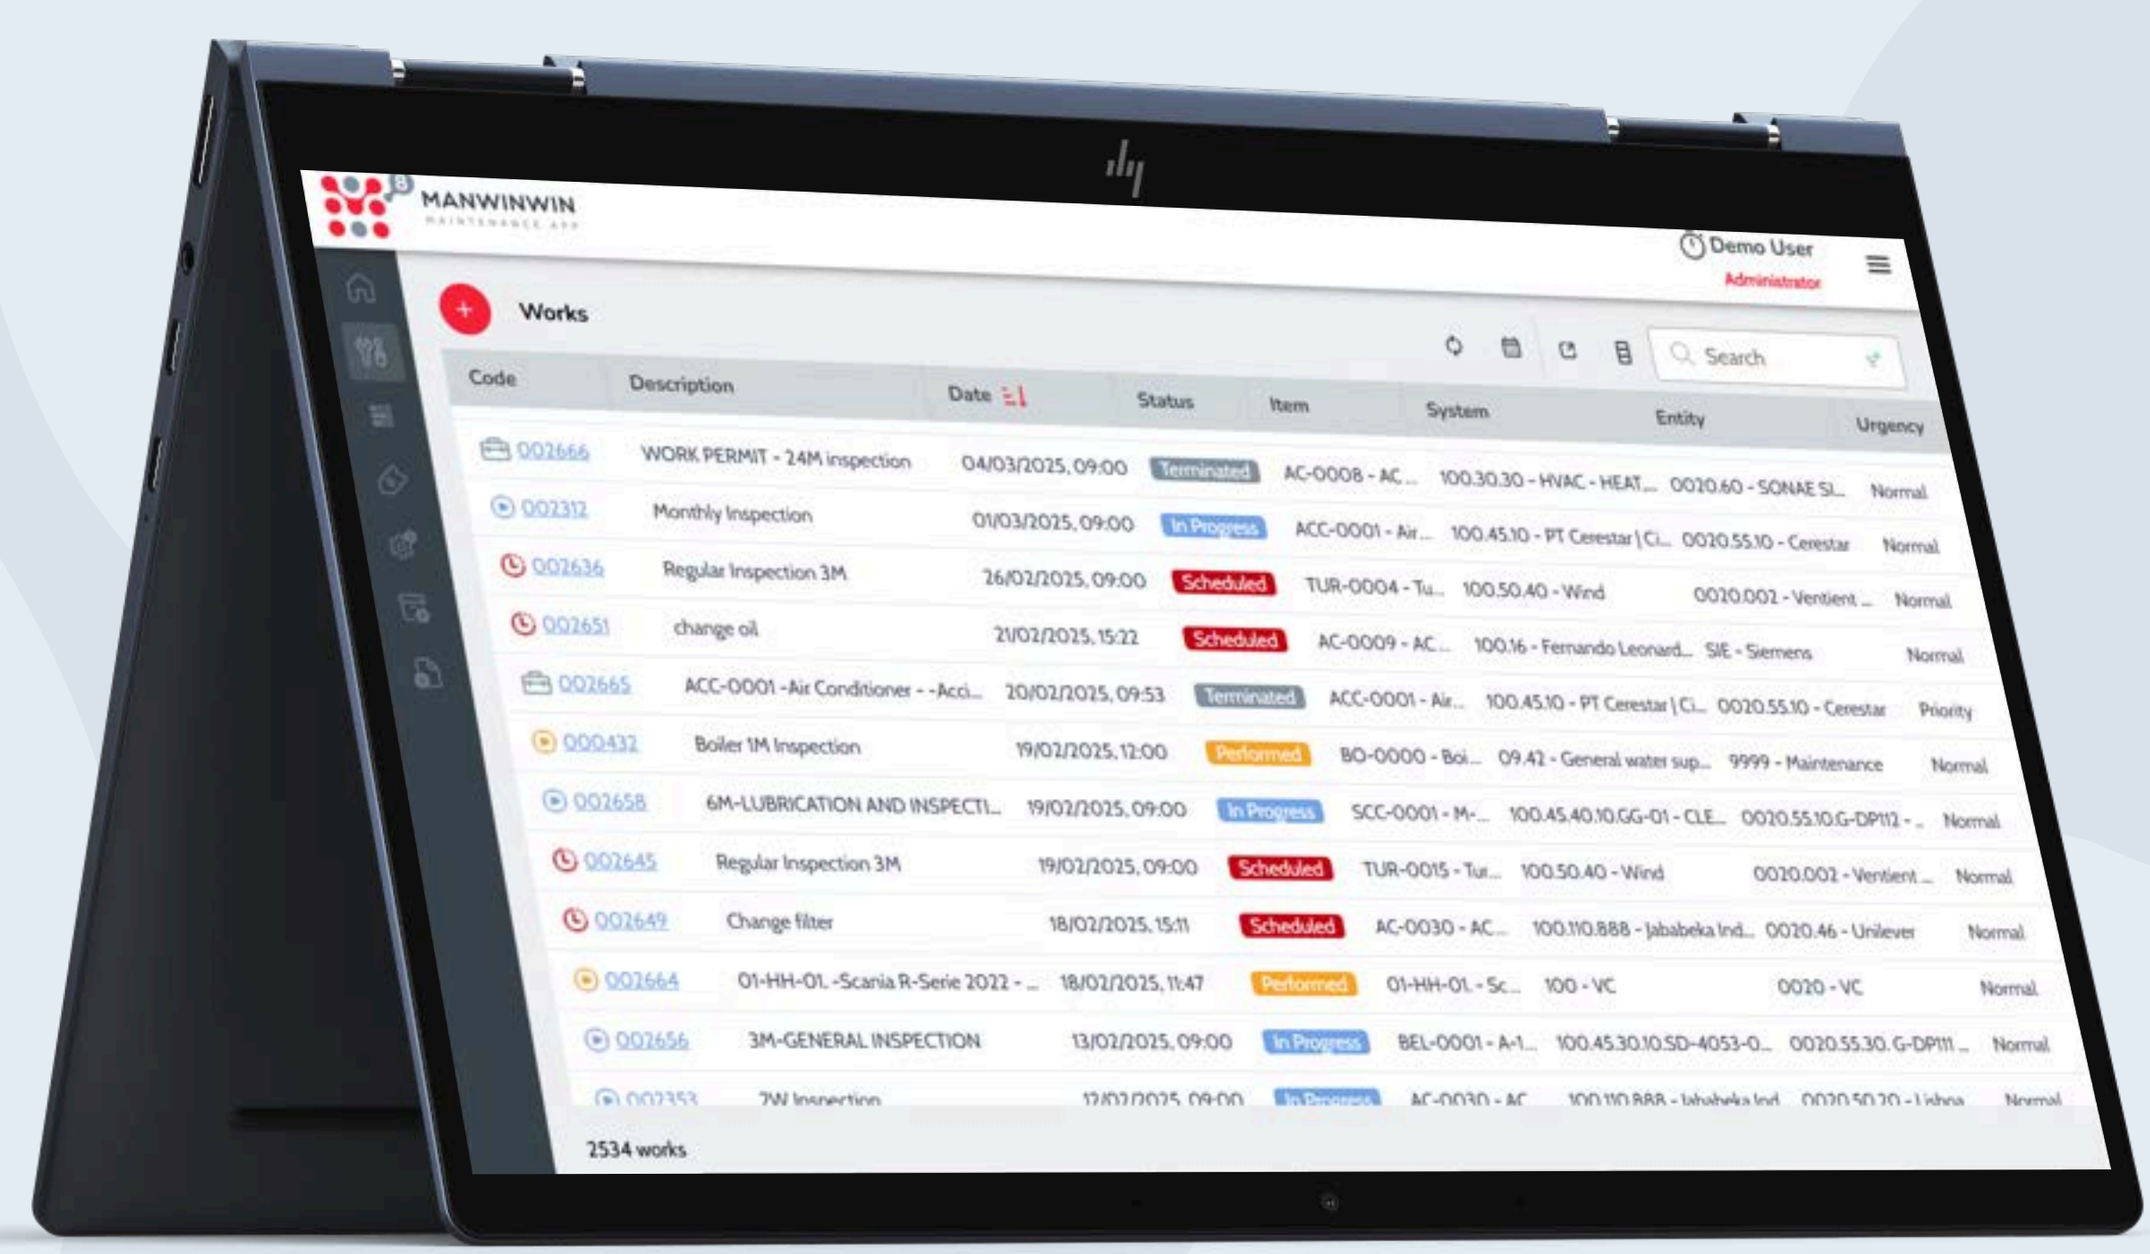
ManWinWin web

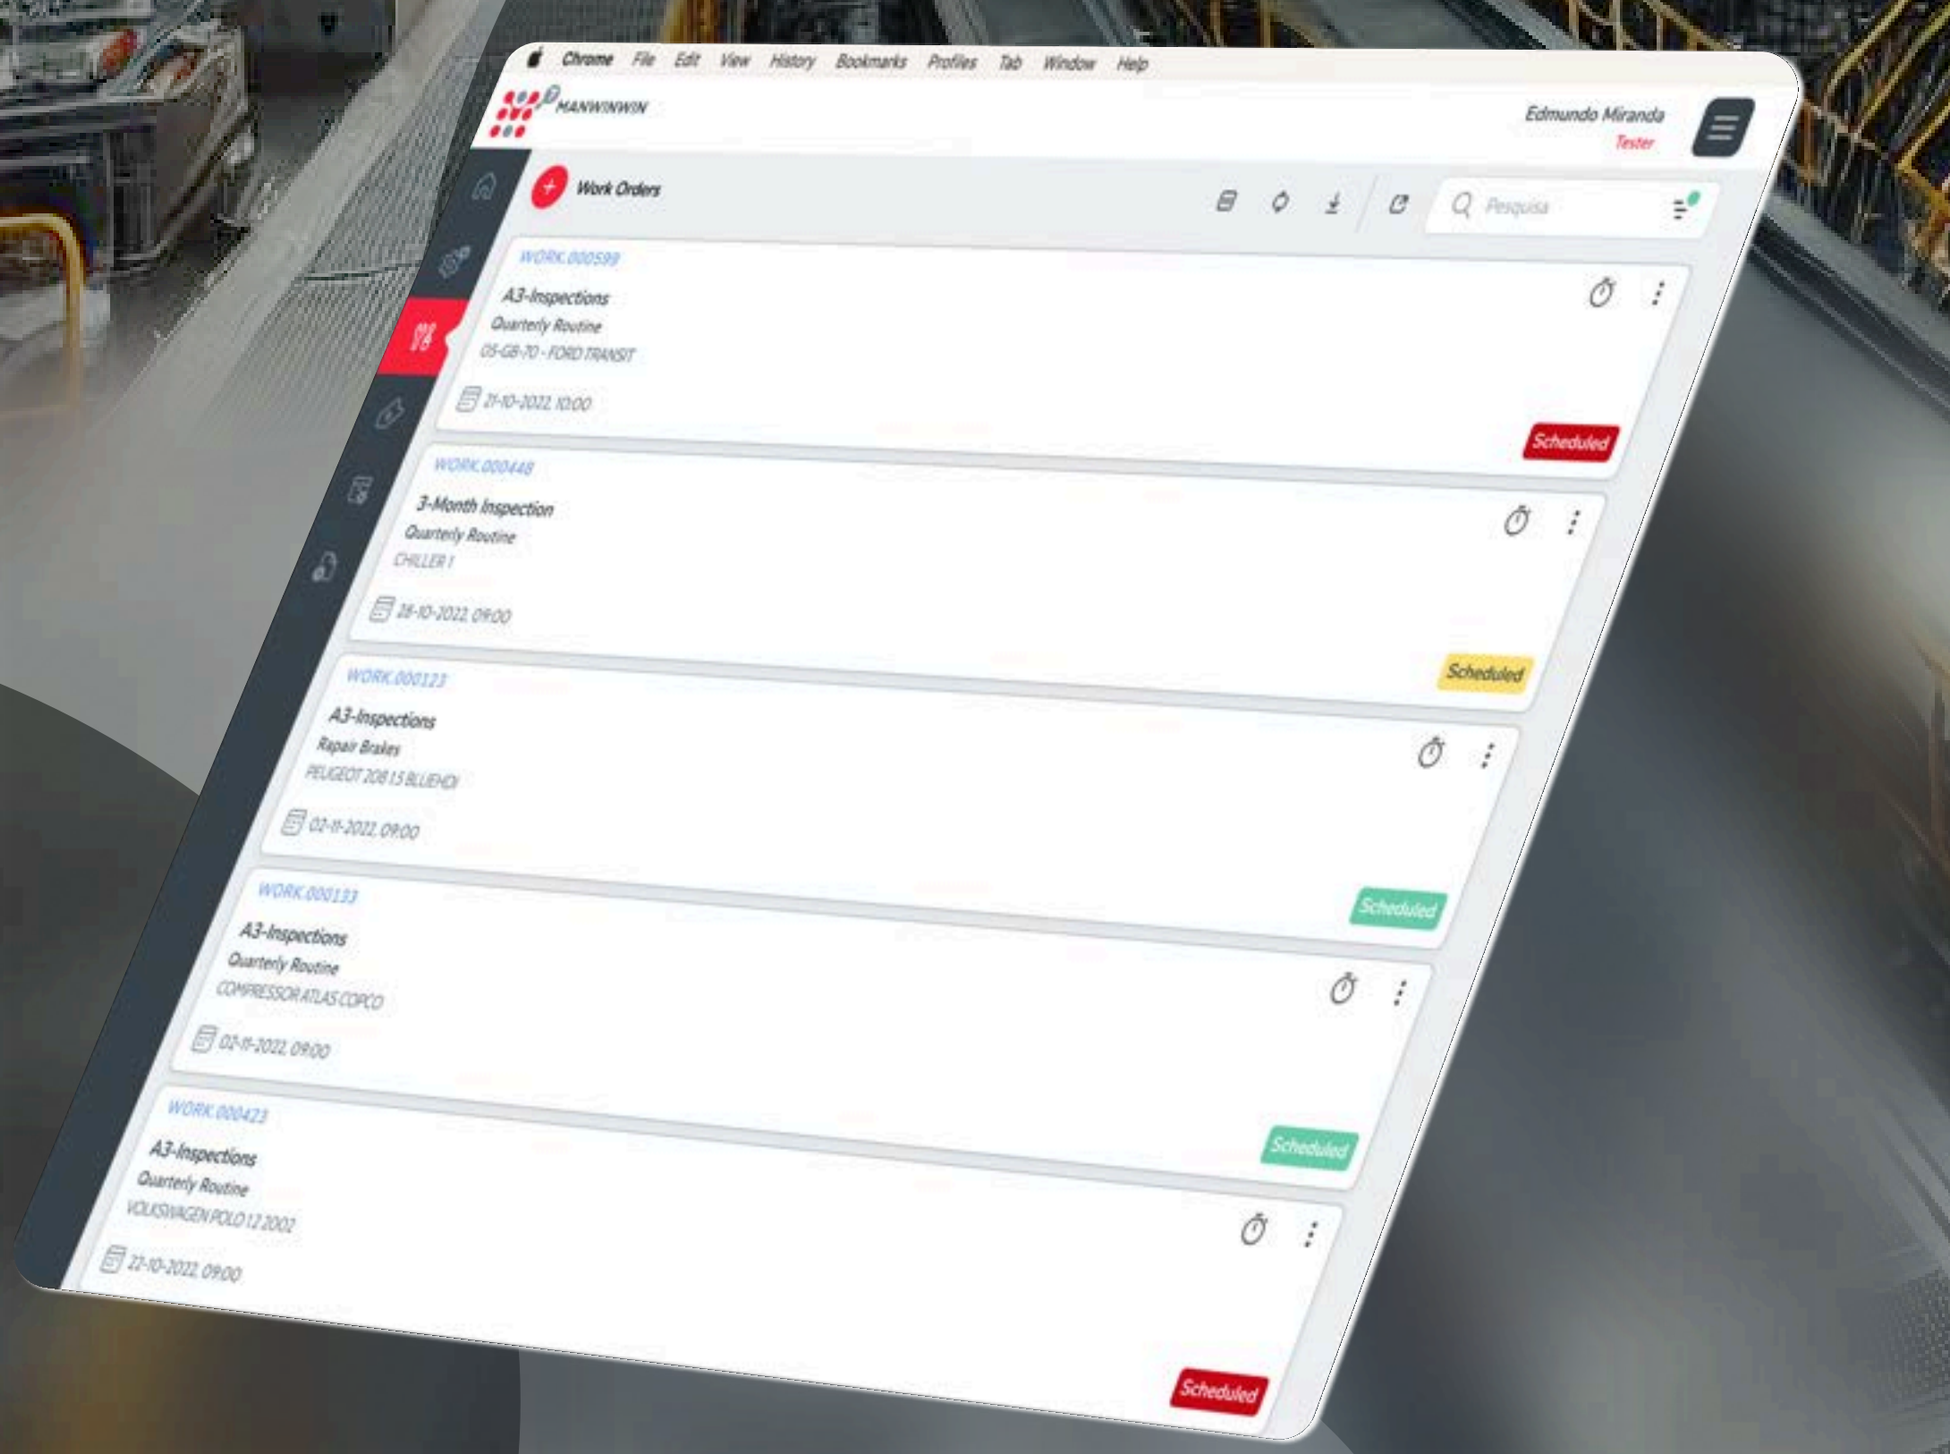
Where knowledge meets innovation
to create a smarter maintenance software.



MANWINWIN

manwinwin.com

Maintenance, made Smarter. Easier. Anywhere. Anytime.



A Modern UX/UI

ManWinWin WEB has all the necessary resources for daily maintenance tasks.

Responsive interface

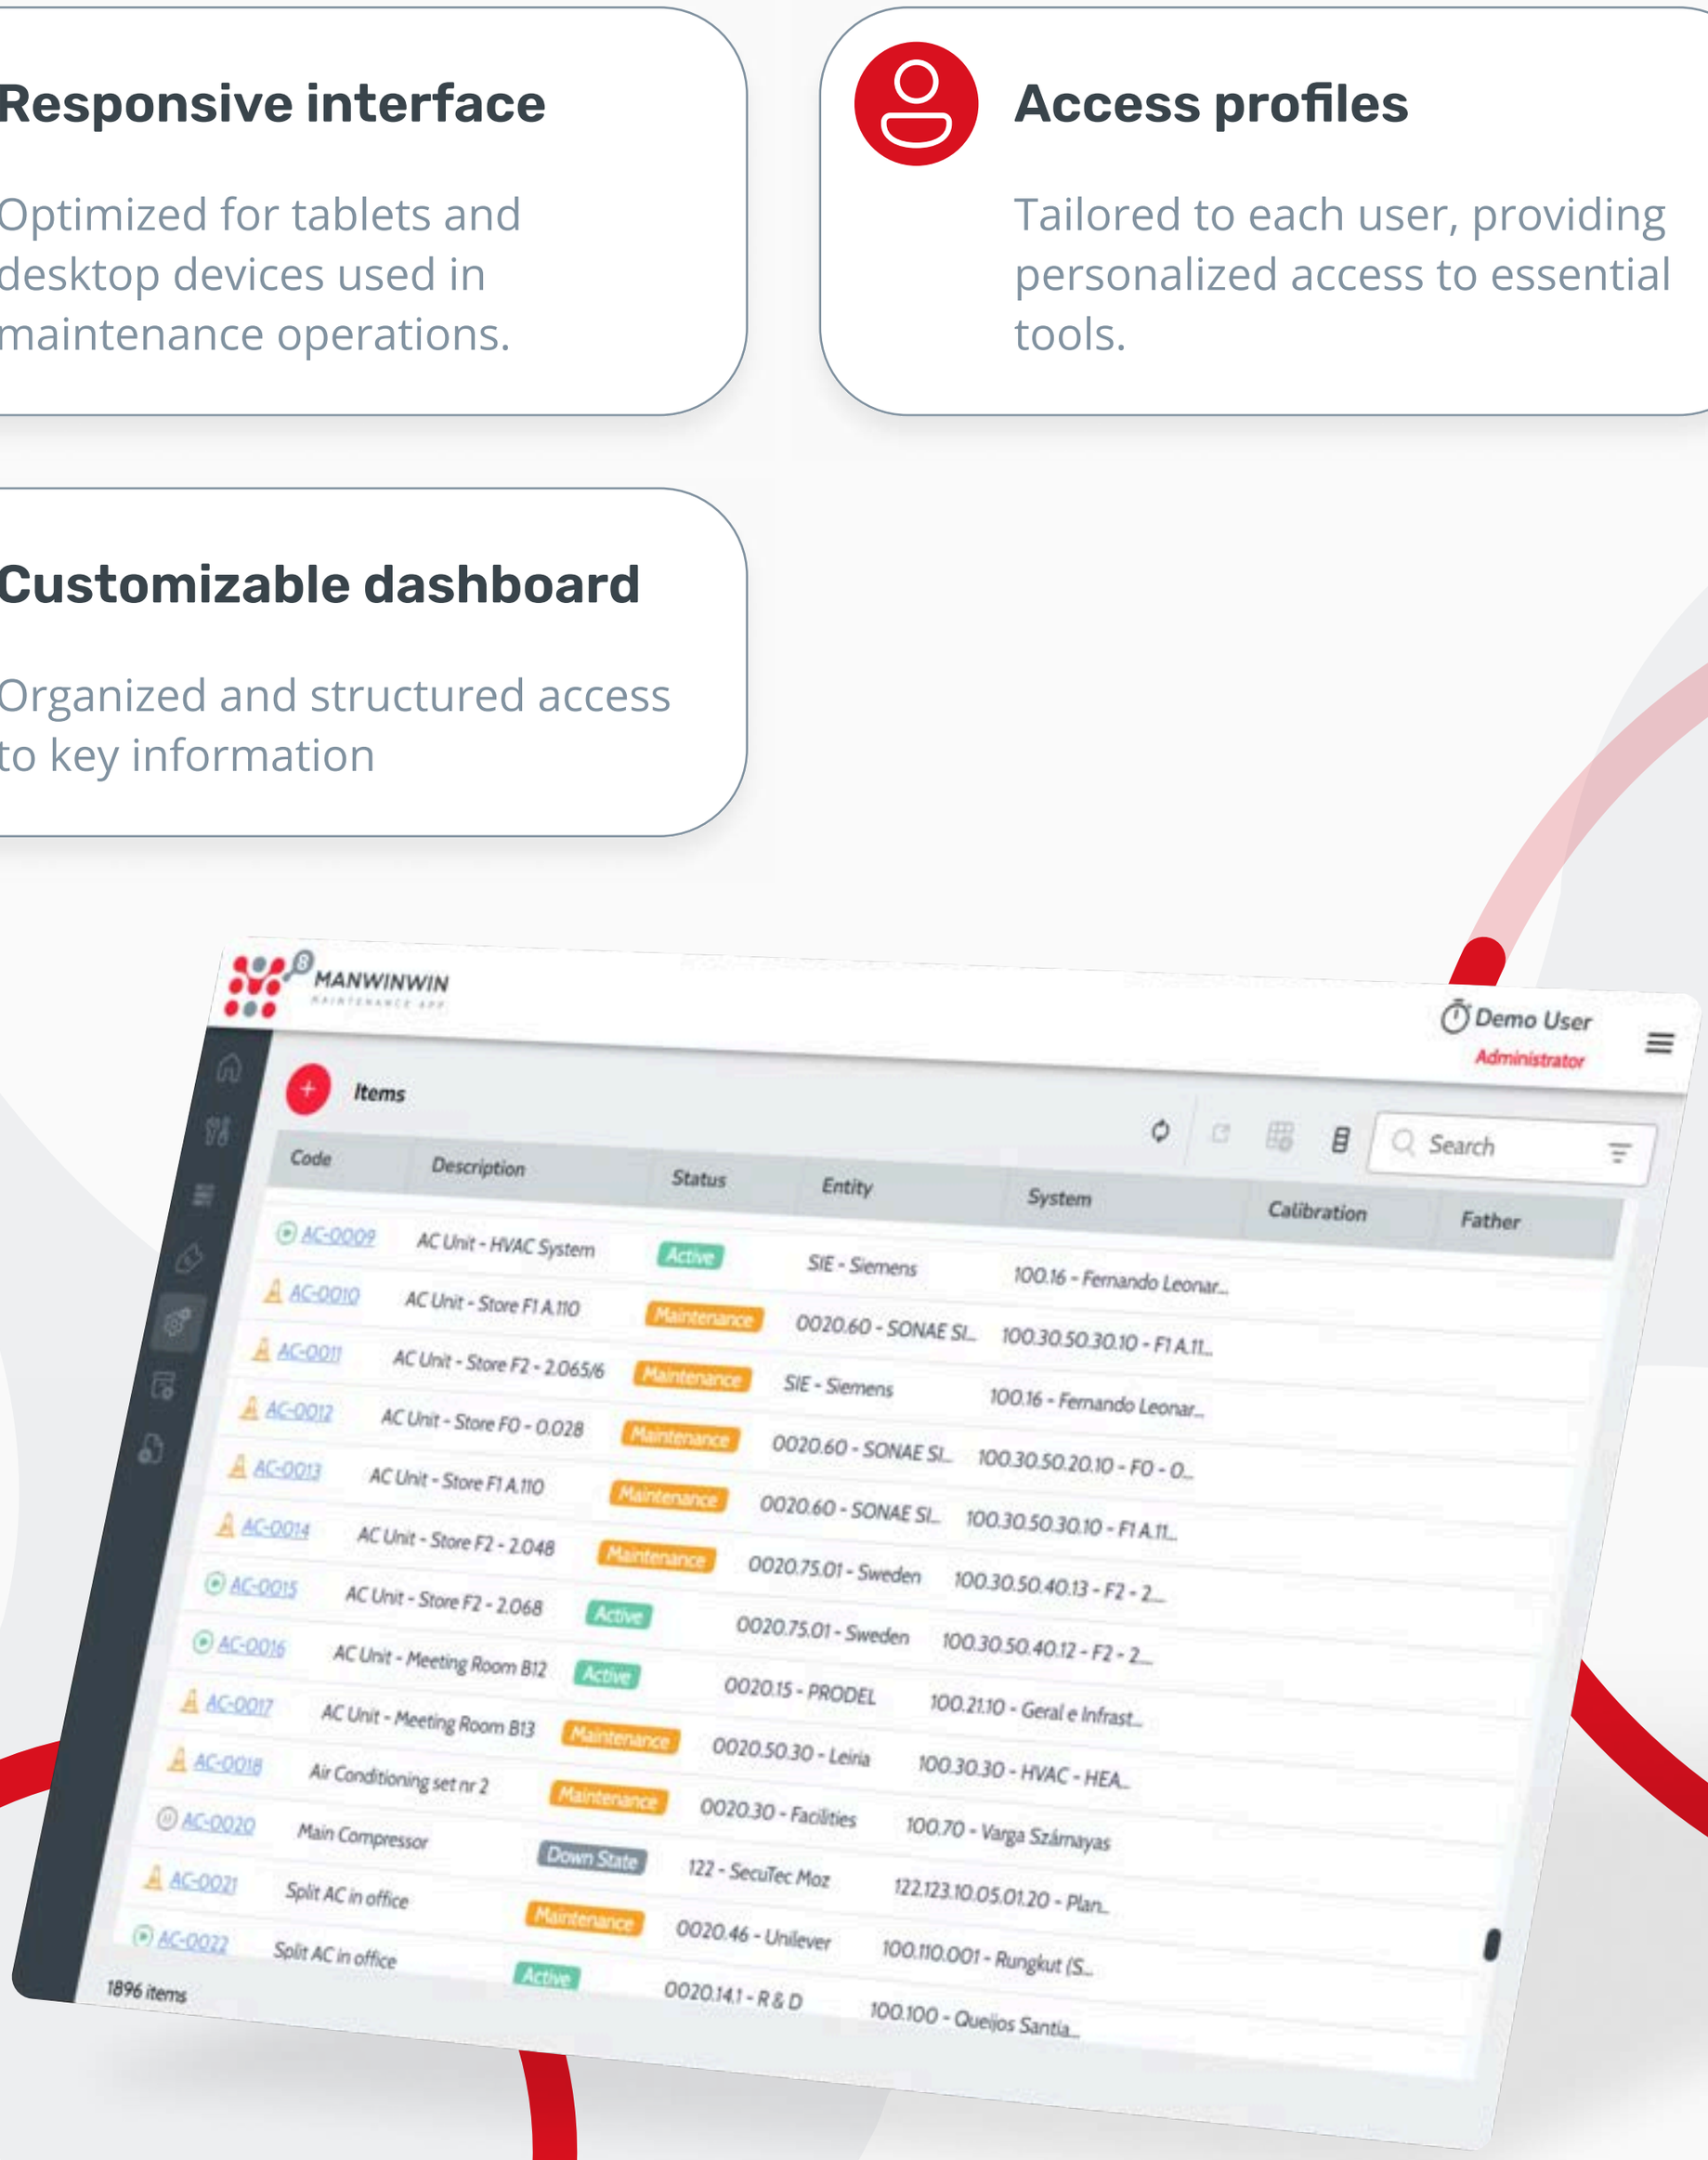
Optimized for tablets and desktop devices used in maintenance operations.

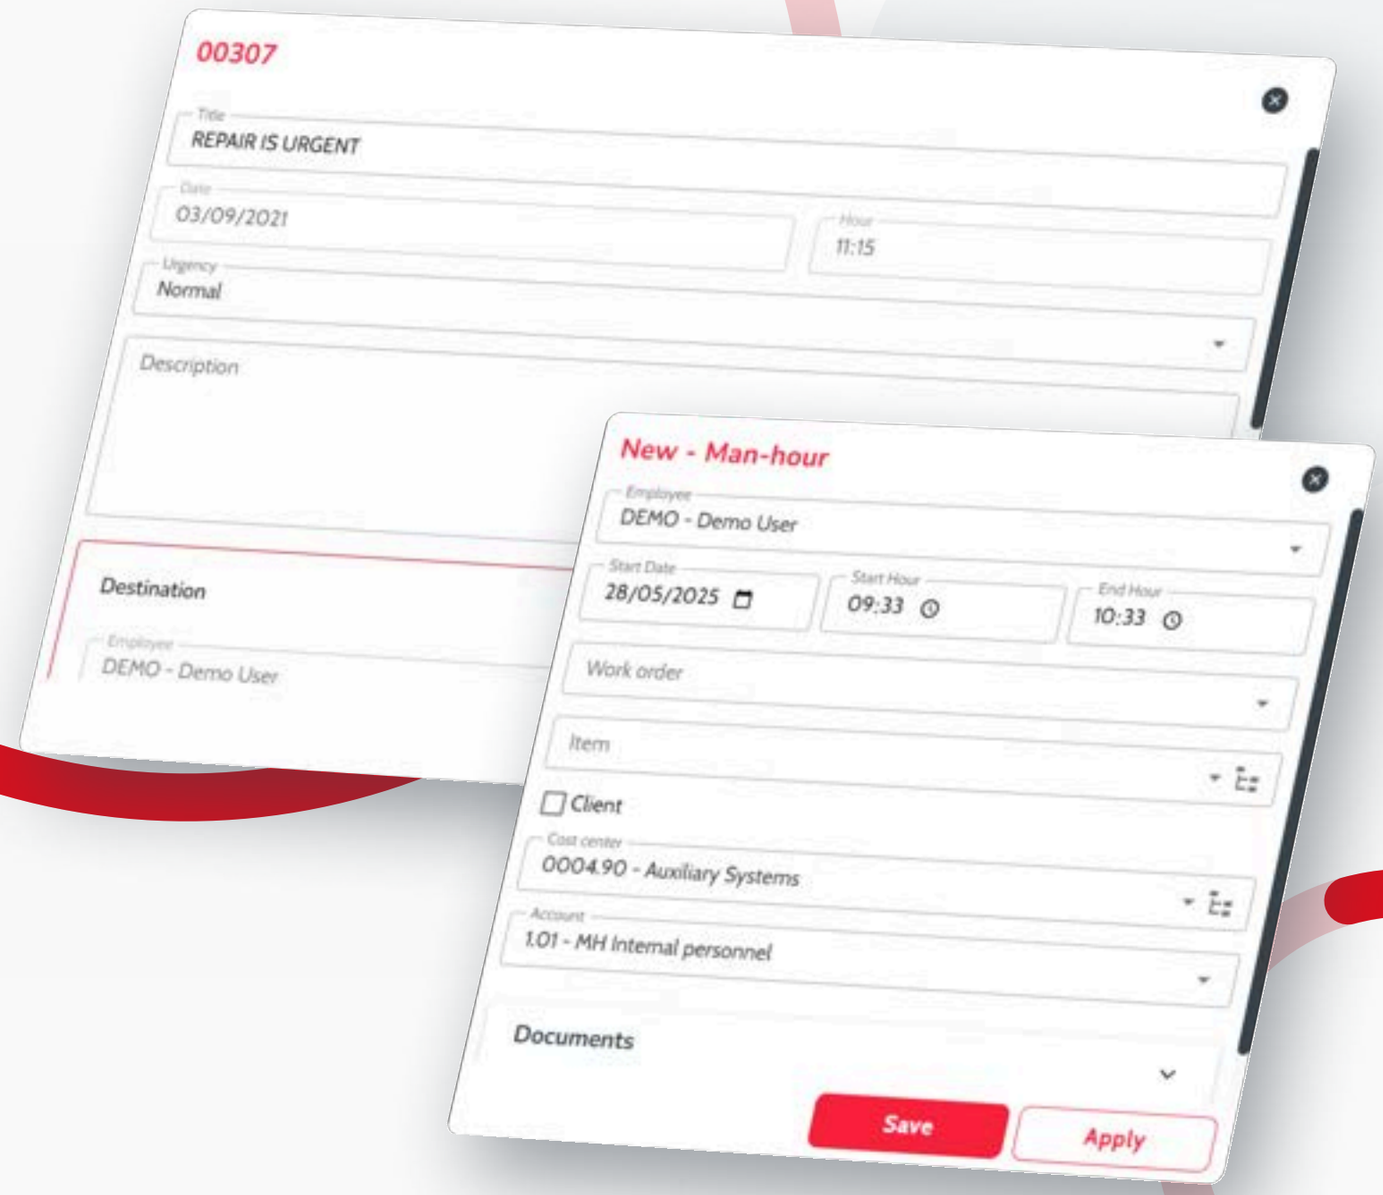
Access profiles

Tailored to each user, providing personalized access to essential tools.

Customizable dashboard

Organized and structured access to key information





Access anything from anywhere

Any user with specific, predefined access level can view:

- Equipments
- Technical data
- Documents
- Photos
- Running records
- Reading Points
- Applied stock items
- Maintenance history

Efficient maintenance

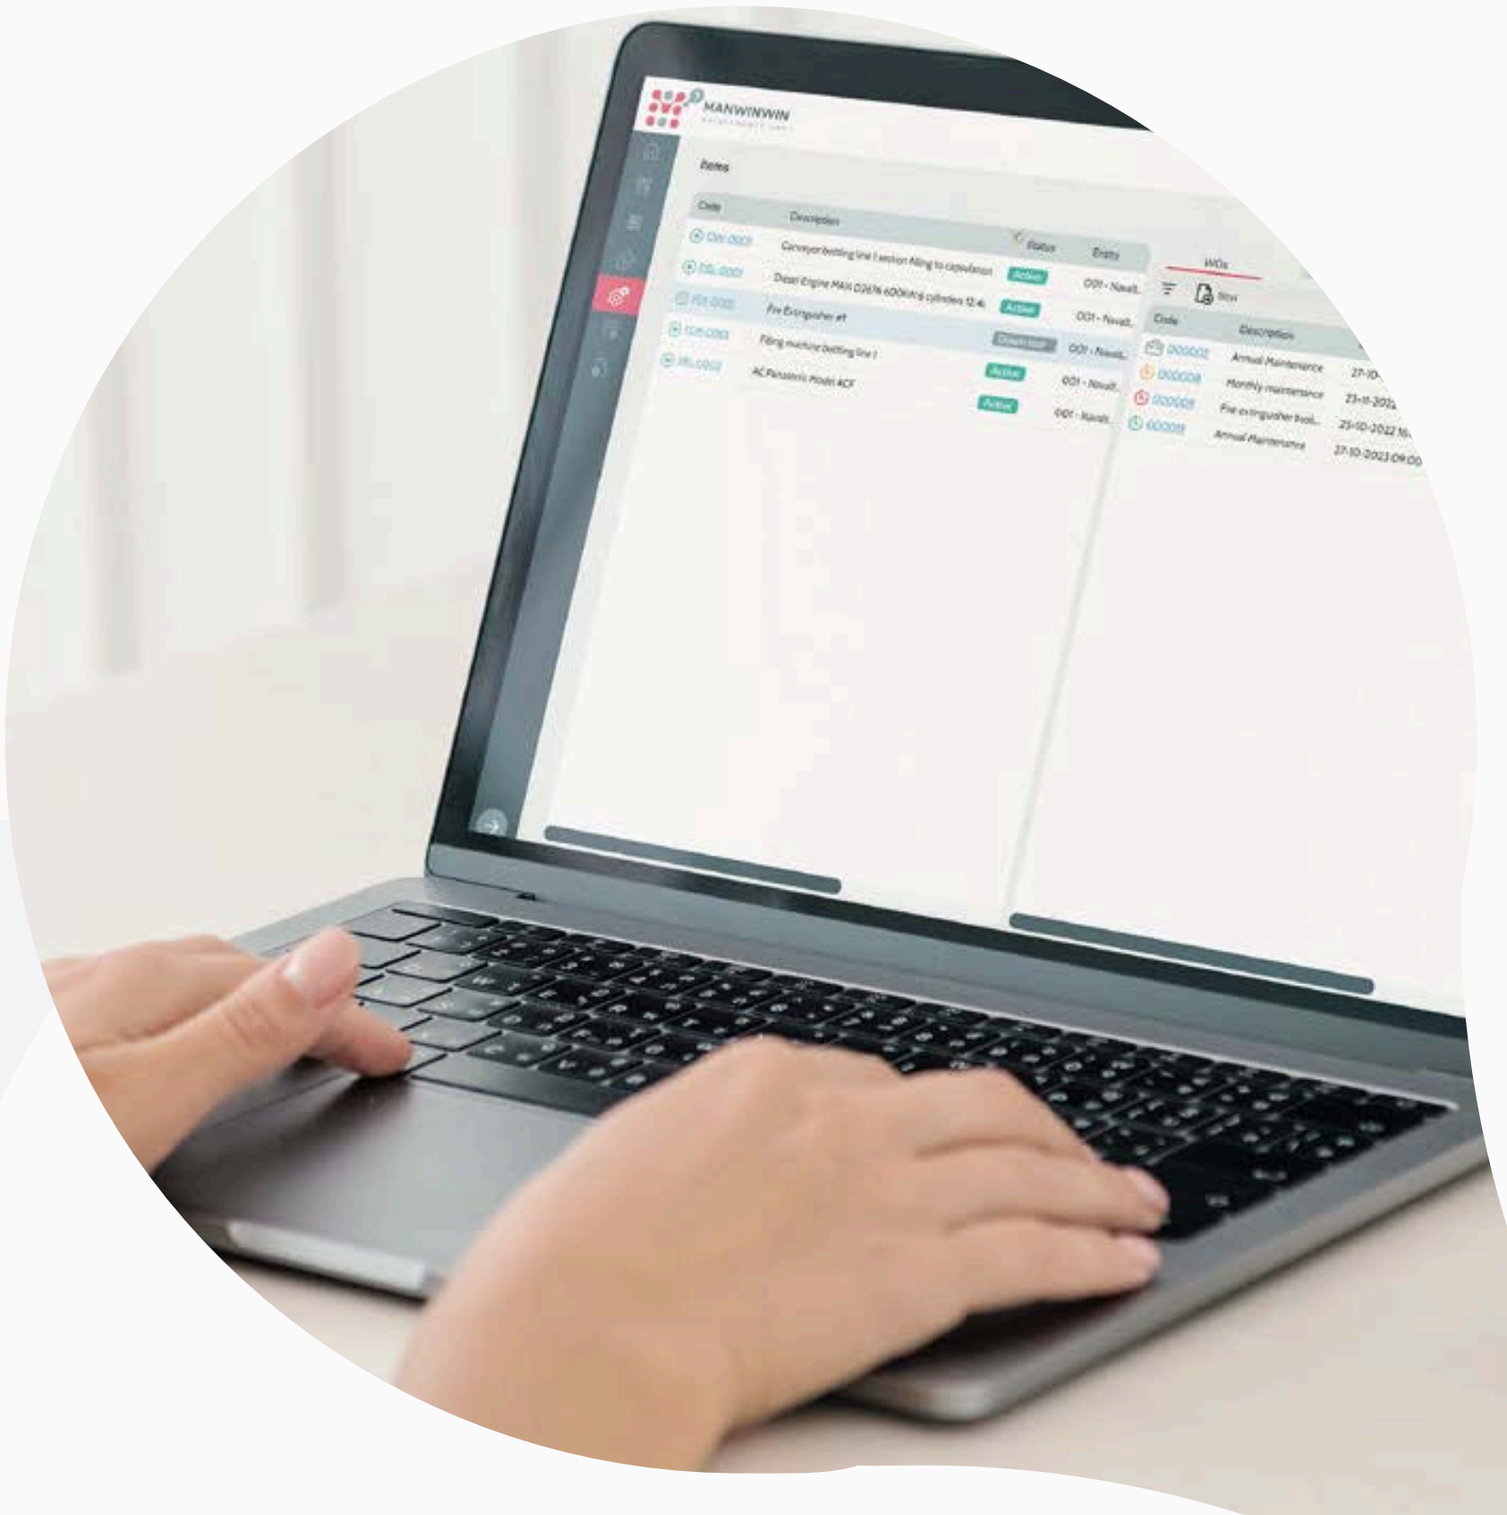
Start Stop + **Augmented Reality** + **Digital Signature**

Easily track work order status for all maintenance activities.
Technicians access their tasks, log time,
and report spare parts used, either from the warehouse
or purchase orders.

Augmented reality provides step-by-step instructions
with 2D overlays on real equipment images, helping
technicians execute tasks efficiently.

A **start/stop** feature simplifies time tracking.

ManWinWin Web offers two additional
statuses during work order progress,
allowing job execution and approval
with **digital signatures**.



Go paperless

NFC QR codes

ManWinWin Smart Tag feature enables seamless maintenance by scanning QR codes or NFC tags on equipment. With a smartphone or tablet, users instantly access technical data, photos, and maintenance options.

This technology ensures technician presence, **streamlines the process**, and eliminates paper usage for efficient management.

Streamline requests

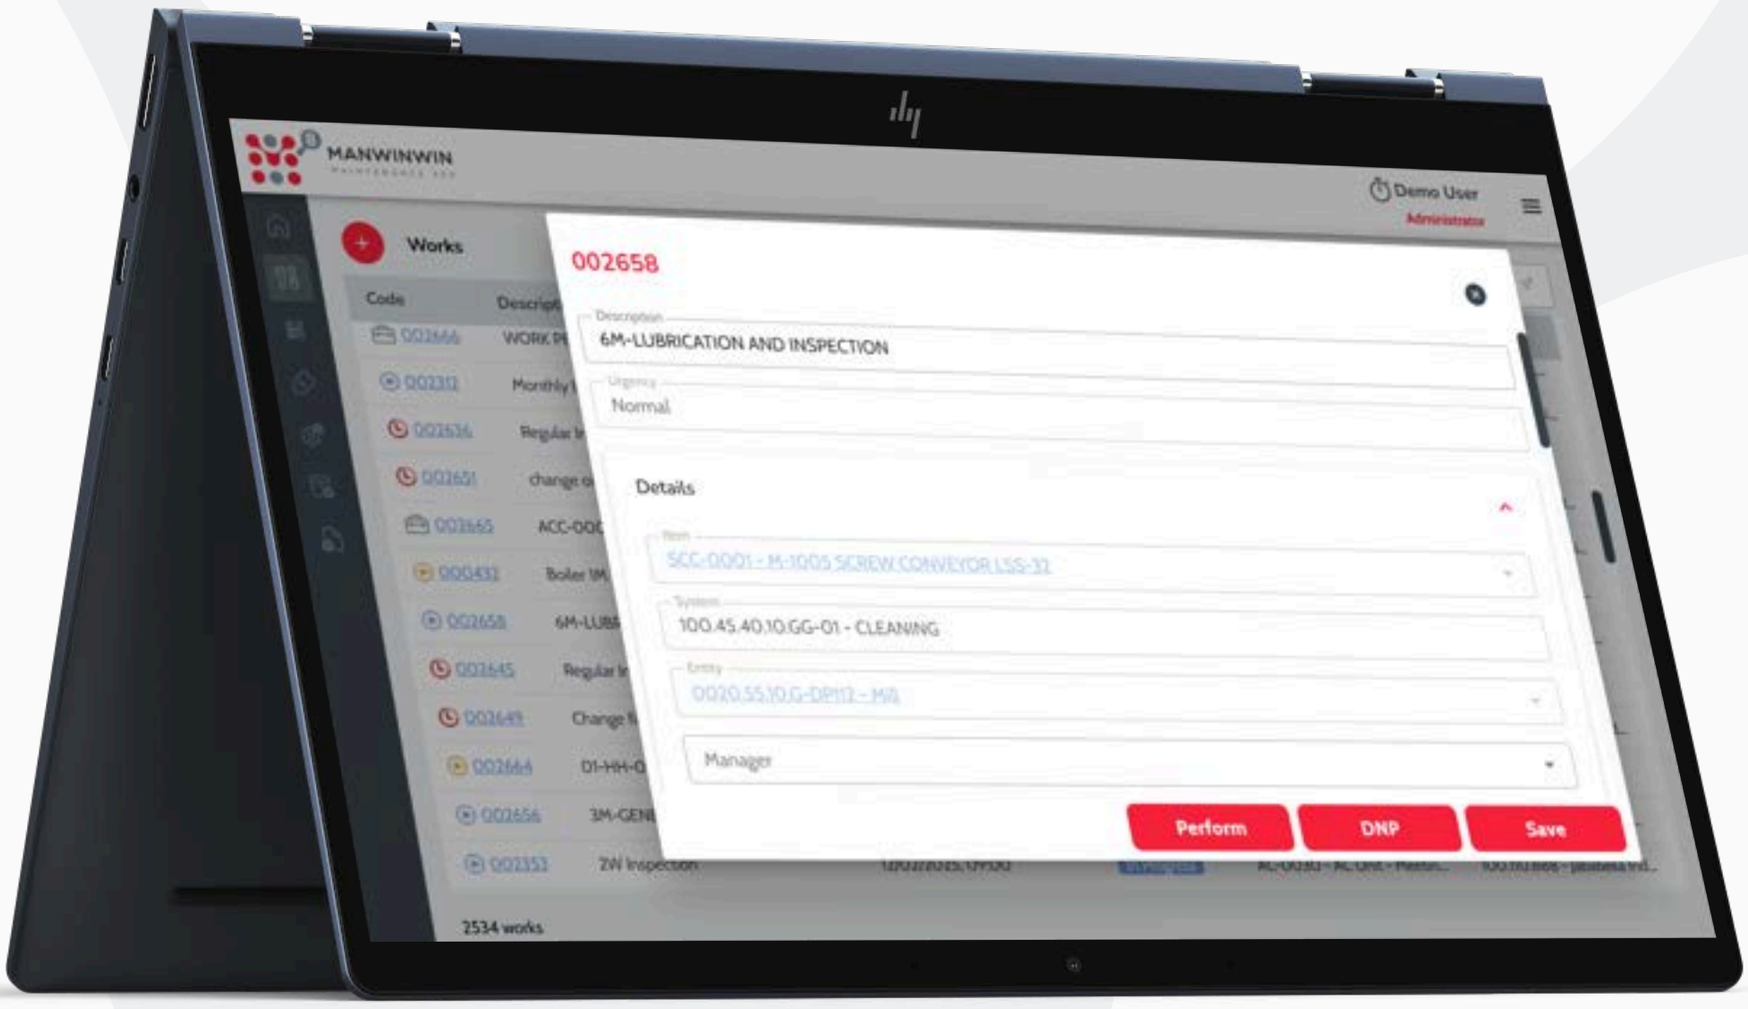
Purchase requests

Warehouse requests

Add Photos & Details

To **speed up the execution of maintenance orders**, each operator can easily submit their own requests — whether purchase orders or warehouse orders — and manage them directly from ManWinWin Web.

They can also attach photos or written details to their requests or fault reports in real time.



Centralizing warehouse management

Warehouse management

ManWinWin Web provides the necessary features
to check the items in each warehouse, including stock levels,
minimum/maximum thresholds, unit costs,
and recent movements. It also allows for the creation
of stock in and out records.
